

Clean Water Indiana (CWI) - Snapshot

Benefits to the Citizens of Indiana through CWI funding:

- ✓ Working with ALL land users to support VOLUNTARY conservation on private lands.
- ✓ Protecting and promoting our SOIL resource. Agriculture in Indiana is blessed with exceptional soils and weather. We can't change the weather, but we can protect the soil for future generations.

CWI supports 92 local soil and water conservation districts whose mission is to promote soil and water conservation through education, technical assistance and cost-sharing.

- ✓ Improving WATER QUALITY through a non-regulatory approach of education, demonstrations, technical, and financial assistance.

The Conservation Reserve Enhancement Program (CREP) has obligated 12,892 acres in native grass plantings, hardwood tree plantings, riparian buffers, and wetland restoration. \$3,611,101 million in state funding has leveraged \$7-\$10 in federal funding for every state dollar.

- ✓ LEVERAGING funds by creating partnerships between local, state, and federal agencies and the private sector.

Indiana's Investment (\$) in Clean Water Indiana Leveraged in FY 2015

2018-2019 Biennium Budget Request
